Product Description short	Single segment brush with a diameter of 125 mm, bore diameter of 13 mm and PA nylon filling
Product Description long	The single segment brush is used in circular and band saws to clean the chip space. The motion of the blade or band causes the brush to roll off and press the chips out of the chip space. This prevents built-up edges and extends the service life of the blade. The brush is compatible with all common machines. Of premium "Made in Germany" quality, this product is frequently used in industrial companies and the skilled trades for metalworking and in the automotive supply sector.

Description

Single segment brushes
Single segment brushes from LESSMANN typically have a small clamping width and narrower filling width. They are used mainly for deburring work in stationary machines or machining centres. The design of these brushes makes it possible for them to be assembled into wide rollers.
