Product Description long

The wheel brush is used in circular and band saws to clean the chip space. The motion of the blade or band causes the brush to roll off and press the chips out of the chip space. This prevents built-up edges and extends the service life of the blade. The brush is compatible with all common machines. Of premium "Made in Germany" quality, this product is frequently used in industrial companies and the skilled trades for metalworking and in the automotive supply sector.
