Product Description short	Wheel brush with a diameter of 250 mm, bore diameter of 33 mm and encapsulated steel wire filling

Product Description long	The wheel brush is mainly used for deburring work in stationary machines, tabletop deburring machines and machining centres. The version with steel wire is used on steel surfaces. This wheel brush is suitable for the following applications: Removing rust, paint, dirt, etc., and for roughening, deburring, stripping and polishing. Because the filling is embedded in a tough polymer compound, its width remains constant during use and it is protected against premature breakage of individual wires. Of premium "Made in Germany" quality, this product is frequently used in industrial companies and the skilled trades for metalworking and in the automotive supply sector.
