Product Description short	Deburring roller brush, 600 mm wide, with a diameter of 250 mm and brass-coated stranded wire filling

Product Description long	The deburring roller brush is mainly used in deburring machines. The version with brass-coated stranded wire STL is used on steel surfaces. The dense filling sets this special roller brush apart. The roller brush is balanced without balancing weights, meaning it runs smoothly, with low vibration, throughout its service life. Deburring roller brushes with stranded wire are particularly suited to working on very hard materials. The multistrand structure gives the individual wires added support, which significantly enhances the brushing effect. Of premium "Made in Germany" quality, this product is frequently used in the metalworking and plastics industries.
