| Product Description short     | Bevel brush with a diameter of 70 mm, shank diameter of 6 mm and steel wire filling                    |

Product Description long

The bevel brush with shank is used for derusting, polishing, removing paint and dirt, and light deburring work on irregular surfaces. The steel filling is suitable for steel surfaces. The brush, with its permanently mounted 6 mm shank, is suitable for professional use. The dense wire filling and perfectly balanced running properties are characteristic of this product. Of premium "Made in Germany" quality, this product is primarily used in factories and the skilled trades for metalworking, in car repair shops, and in stair, railing and container construction.

## Description

### Bevel brushes with shank

Bevel brushes with shank from LESSMANN, with their conical shape, are ideal for grooves, corners, creases, inside edges and irregular surfaces. The integrated shank, dense filling and perfectly balanced running properties are characteristic of this all-round tool. Work can be performed more easily by mounting brushes of this type in hand-operated grinders or flexible shafts. These brushes are also suitable for mounting on high-speed straight grinders and compressed-air drives.
