Product Description short	Micro interior brush, interior brush IBE with a total length of 125 mm, diameter of 7 mm, encapsulated steel wire filling and galvanised twisted wire

Product Description long	The micro interior brush is used for the manual or machine cleaning and deburring of bores, threads, cut edges and grooves. The steel filling is suitable for steel surfaces. Because the filling is embedded in a tough polymer compound, its width remains constant during use and it is protected against premature breakage of individual wires. For use on interior areas, the diameter should be selected to match the workpiece. Of premium "Made in Germany" quality, this product is frequently used in the metalworking and automotive industries.
