Article Description Marketing	Fitting brush IBM
On Stock as per Catalogue	Yes
Version	with two-component handle
Single/Double Spiral	Single spiral
Grifffarbe_korr	Red | Black
Catalogue Page	134
Product Description short	Fitting brush IBM with plastic handle, a total length of 185 mm, diameter of 22 mm and stainless steel wire filling

Product Description long	The fitting brush is used to manually clean stainless steel and copper fittings. The two-component handle reduces fatigue when working with the brush. The brush is a preferred choice in a wide variety of fields. It can be used to clean tubes, grates, sleeves and cylinders. The interior brush is also suitable for deburring cross bores. For use on interior areas, the diameter should be selected to match the workpiece. When purchasing interior fitting brushes, be sure to choose only stainless steel wire fillings. It is the only way to avoid the dreaded pitting caused by wire particles that rust. Of premium "Made in Germany" quality, this product is frequently used in the skilled trades, industrial companies, by DIYers, and in the HVAC and plumbing sectors.
