Product Description short	Set of twisted brushes with wire handles, external thread and steel wire filling

Product Description long

The set of twisted brushes includes tube brushes, boiler brushes, back board brushes and wire handles. The tube brushes are used to manually remove rust, dirt and paint. The steel filling is suitable for steel surfaces. The tube brushes with external thread are a preferred choice in a wide variety of fields. They can be used to clean tubes, grates, sleeves, cylinders and more. The tube brushes are also suitable for deburring cross bores. For use on interior areas, the diameter should be selected to match the workpiece. The boiler and back board brushes are used to manually clean boilers. The steel filling can be used even if a boiler is warm. Cleaning boilers increases a system's efficiency and reduces pollutant emissions. LESSMANN boiler and back board brushes boast high-quality materials and precision manufacturing. The external thread makes it possible to extend brushes using the corresponding handles. The wire handles extend the reach of the brushes. A wire handle has a thread on one end so that it can be attached to LESSMANN interior brushes with thread. The other end is provided with a loop for gripping the brush. A wire handle has internal and external threads on the ends so that it can be attached to LESSMANN interior brushes with thread. Of premium "Made in Germany" quality, this product is frequently used in the skilled trades, repair shops, industrial companies, by DIYers, and in the HVAC and plumbing sectors.
